Translation Management

WordPress 5.5 is available! Please update now.

Settings

Want to know if recent translations you received have problems?

You got back several jobs from translation and they now appear on your site. WPML lets you open these pages for feedback, so that visitors can tell you if they notice anything wrong.

Enable Translation Feedback · Learn more about translation feedback

Learn how to translate media

WPML allows you to use different media (images, etc.) for translated content. The Media Translation process is integrated with WPML's content translation, but requires additional steps.

Before you start, we highly recommend that you review the Media Translation documentation. Then, you'll be able to close this message.

Minimize ▲

Click here to reauthenticate to be able to access reports. For more information why this is required, see our blog post.

Facebook for WooCommerce is almost ready. To complete your configuration, complete the setup steps.

There is an update available for: ***Contact Form 7*.**

The following plugins need to be updated to their latest version to ensure maximum compatibility with this theme: *Goodlayers Core, Goodlayers Core Personnel, Goodlayers Core Portfolio, Goodlayers Core Twitter* and *Revolution Slider*.

Begin updating plugins | Dismiss this notice

Event Tickets Plus

With this new version, we've made front-end style updates. If you have customized the Tickets section or the Attendee Registration page, this update will likely impact your customizations.

We've also introduced a new Attendee Registration Information flow for ticket purchasers! If you use Attendee Registration, please select which user flow you prefer for your website in the Attendee Registration Settings.

You're all done. From now on, all new media files that you upload to content will receive a language. You can automatically duplicate them to translations from the post-edit screen.

⚠ Multilingual Content Setup | Translation Notifications | Custom XML Configuration

⚠ There is new translated content on this site. You can scan posts and strings to adjust links to point to translated content.

Translate Link Targets

How to translate posts and pages · Posts and pages synchronization · Translated documents options · Custom posts slug translation options · Translation pickup mode · XLIFF file options · Custom Fields Translation · Custom Term Meta Translation · Post Types Translation · Taxonomies Translation · Media Translation · Translate Link Targets

WPML can read a configuration file that tells it what needs translation in themes and plugins. The file is named wpml-config.xml and it's placed in the root folder of the plugin or theme.

Learn more

How to translate posts and pages

New content

● Use WPML's Advanced Translation Editor

Advanced Translation Editor is enabled and active · Synchronize translators and translation managers

○ Use WPML's Classic Translation Editor

Content that was created with WPML's Classic Translation Editor

○ Switch to using the Advanced Translation Editor (old translations may be unusable)

● Use WPML's Classic Translation Editor

Translation editor options

To configure how the **WooCommerce products** are translated, visit the WooCommerce Multilingual settings page.

Taxonomies

☑ Don't include already translated terms in the translation editor

Translators help

☑ Show translation instructions in the list of pages

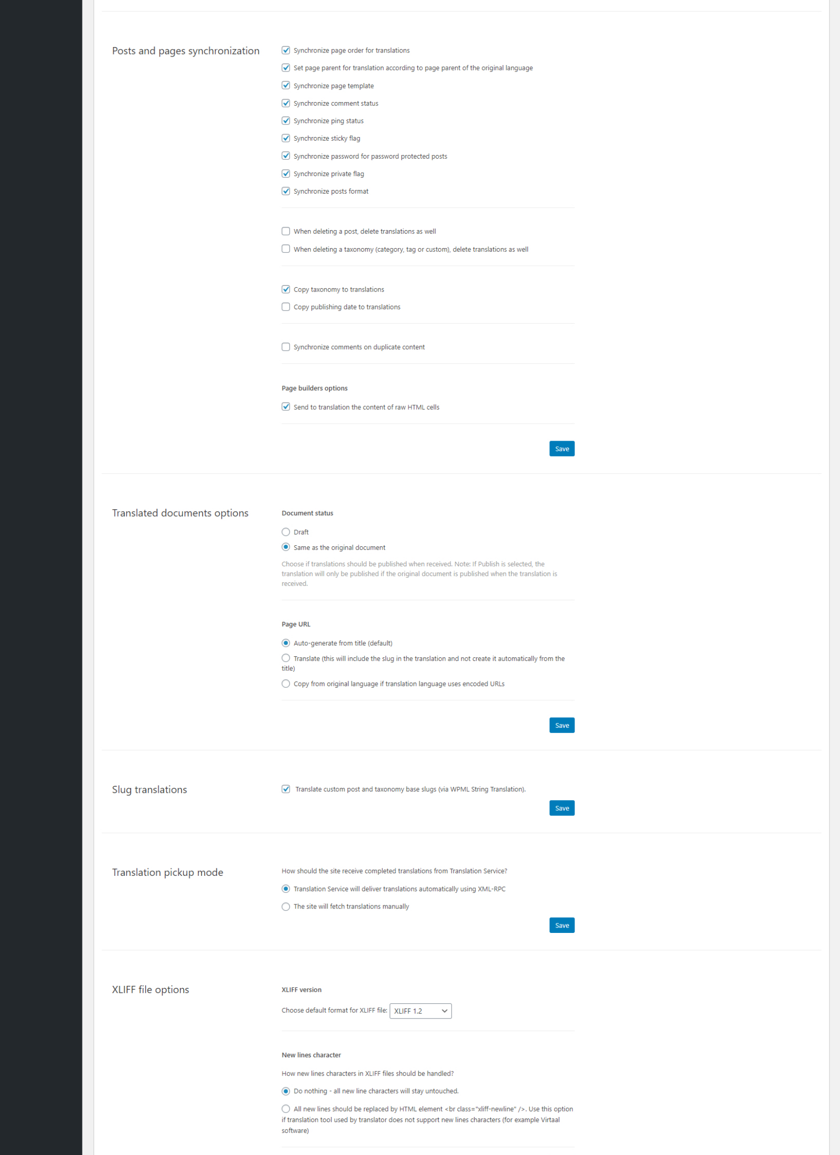
Translation memory for strings

● Look for translated strings and use their translations for new jobs

○ Don't reuse string translation

Learn more about the different translation options

Save



Posts and pages synchronization

☑ Synchronize page order for translations
☑ Set page parent for translation according to page parent of the original language
☑ Synchronize page template
☑ Synchronize comment status
☑ Synchronize ping status
☑ Synchronize sticky flag
☑ Synchronize password for password protected posts
☑ Synchronize private flag
☑ Synchronize posts format

☐ When deleting a post, delete translations as well
☐ When deleting a taxonomy (category, tag or custom), delete translations as well

☑ Copy taxonomy to translations
☐ Copy publishing date to translations

☐ Synchronize comments on duplicate content

Page builders options

☑ Send to translation the content of raw HTML cells

Translated documents options

Document status

○ Draft
● Same as the original document

Choose if translations should be published when received. Note: If Publish is selected, the translation will only be published if the original document is published when the translation is received.

Page URL

● Auto-generate from title (default)
○ Translate (this will include the slug in the translation and not create it automatically from the title)
○ Copy from original language if translation language uses encoded URLs

Slug translations

☑ Translate custom post and taxonomy base slugs (via WPML String Translation).

Translation pickup mode

How should the site receive completed translations from Translation Service?

● Translation Service will deliver translations automatically using XML-RPC
○ The site will fetch translations manually

XLIFF file options

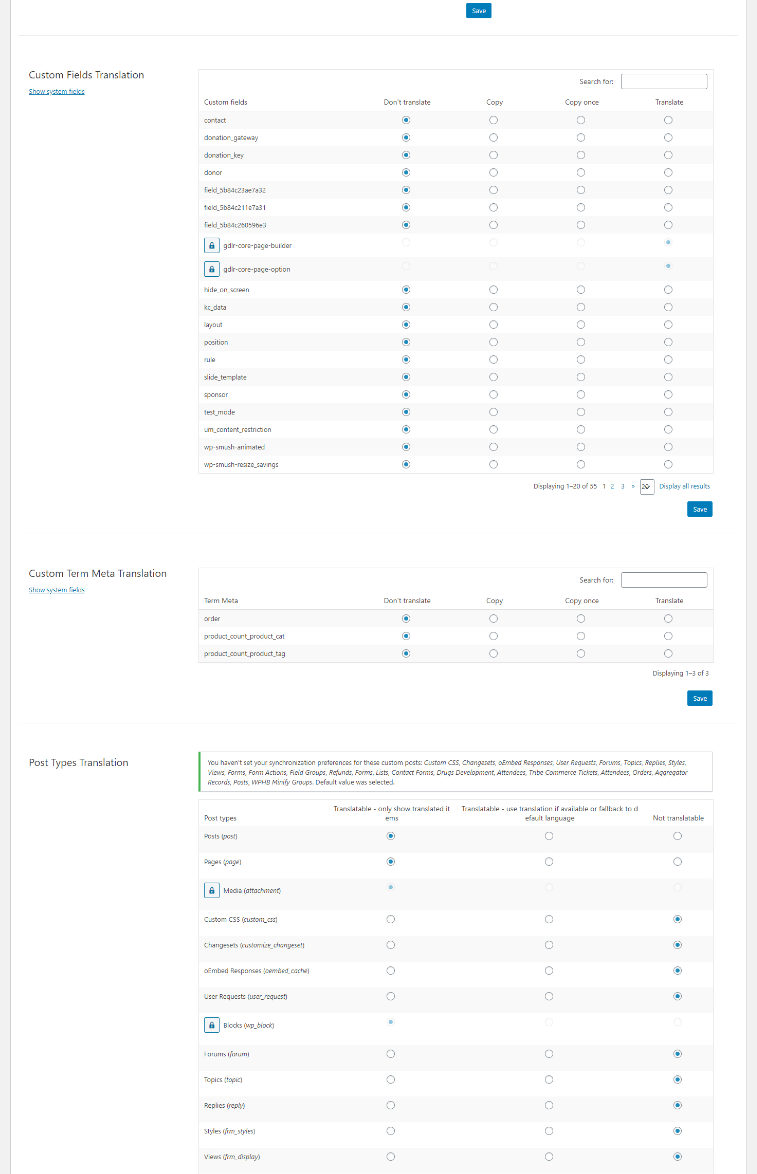
XLIFF version

Choose default format for XLIFF file: XLIFF 1.2

New lines character

How new lines characters in XLIFF files should be handled?

● Do nothing - all new line characters will stay untouched.
○ All new lines should be replaced by HTML element <br class="xliff-newline" />. Use this option if translation tool used by translator does not support new lines characters (for example Virtaal software)



Save

Media Translation

You can check if some attachments can be duplicated to translated content:

☐ Set language information for existing media
☑ Translate existing media in all languages
☑ Duplicate existing media for translated content
☑ Duplicate the featured images for translated content

Media Translation Documentation
Start »

How to handle media for new content:

☑ When uploading media to the Media library, make it available in all languages
☑ Duplicate media attachments for translations
☑ Duplicate featured images for translations
